

## Training

training.

**SPX** offers a range of courses covering joint integrity and flange management to industry recognized standards.

All of our instructors have many years experience in the joint integrity/flange management sector including considerable time in a hands on role actually doing the job that they are now training others to do. Our instructors all have nationally recognized teaching qualifications which reinforce the quality of the training programs that we offer.

Our courses use a mix of both theoretical and practical elements providing a positive learning experience for the learner.

We have a purpose built training facility in which learners are encouraged by our Instructors to embrace all aspects of Health and Safety and to strive for a right first time approach to all joint integrity applications.

Courses can be delivered in a variety of formats including:

- Accredited training
- Well established in house programs
- Bespoke options tailored to a clients requirements

# Training

SPX offer training solutions as indicated below -

## TECSkills PF Units

SPX is accredited by the Engineering Construction Industry Training Board (ECITB) to deliver the following TECSkills Units in specialist critical bolting:

- PF 10 Jointing pipe work using flanged joints
- PF 18 Assembling and Tensioning Bolted Connections
- PF 19 Assembling and Tightening Bolted Connections

The structured training followed by a short period of performing work generates a Logbook which upon successful completion allows the learner to gain a TECSkills Certificate of Training

**SPX can also offer -**

## ECITB Endorsed Certificate Courses

SPX is a TECSkills Accredited Training Provider and can offer following endorsed certificates based on TECSkills Training Units –

- 1 Day Assembling and Tightening of Bolted Connections using Hand Tools
- 1 Day Assembling and Torque Bolted Connections
- 1 Day Assembling and Tensioning Bolted Connections
- 2 Day Assembling and Tightening Bolted Flanged Connections

## SPX Training Courses

ADVISOR – controlled bolting software

CONTROLLER – Joint monitoring software

Service and Maintenance of SPX products

Training courses delivered in the SPX purpose built training facility incorporate practical demonstrations and simulations using the latest flange management tooling and associated equipment in an environment where the emphasis is on Health and Safety at all times.

We can also deliver training courses at a client's workplace depending on location and practical considerations.

A warm welcome awaits all learners at the SPX training facility in Pasadena, TX.
